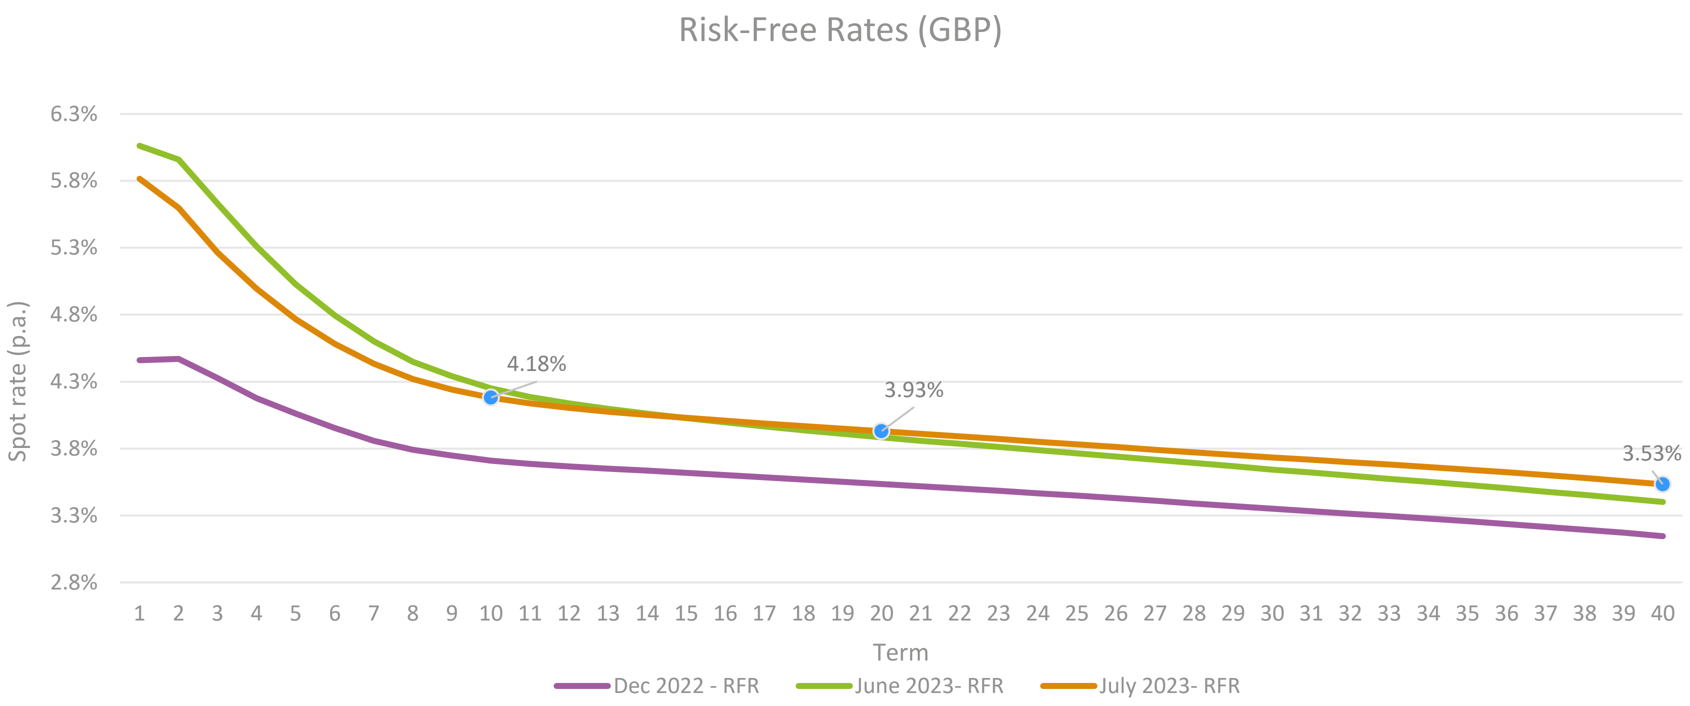
MONTH END SOLVENCY II MARKET INFO (UK)

End July 2023

SELECTED MARKET CHANGES FOR YIELD CURVES, EQUITY SYMMETRIC ADJUSTMENT, VOLATILITY ADJUSTMENT AND FUNDAMENTAL SPREAD FOR THE MATCHING ADJUSTMENT

ZENITH ACTUARIAL

PRA yield curve: Solvency II Risk-Free Rates (GBP)

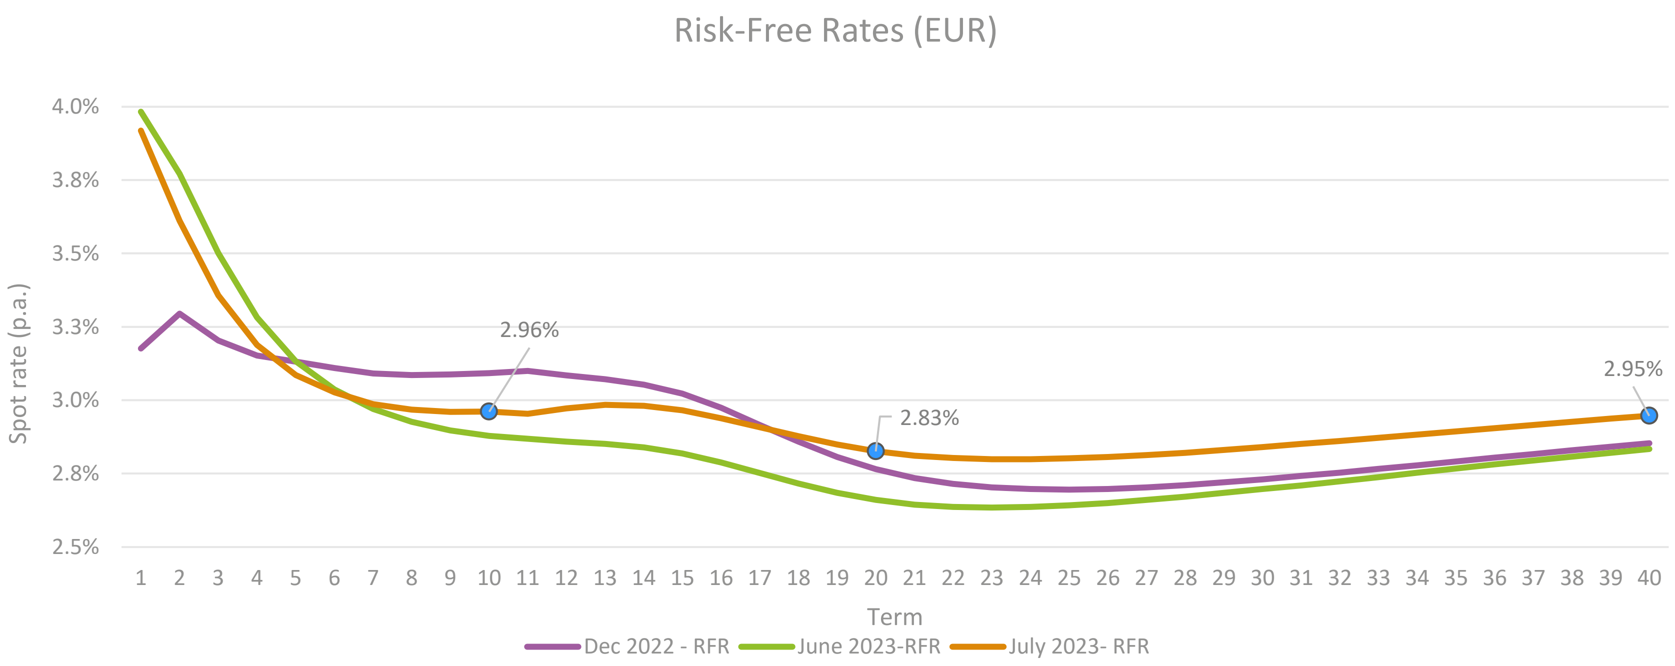


Rates decreased at the short end during July and were down 0.07% at 10 years but increased by 0.05% at 20 years. The curve shape remained similar to June's.

The July 2023 curve was higher than December 2022 and of a similar shape but with a sharper fall at the short end, with rates higher by 0.47% at the 10-year point and rates higher by 0.40% at the 20-year point, respectively.

ZENITH ACTUARIAL

PRA yield curve: Solvency II Risk-Free Rates (EUR)

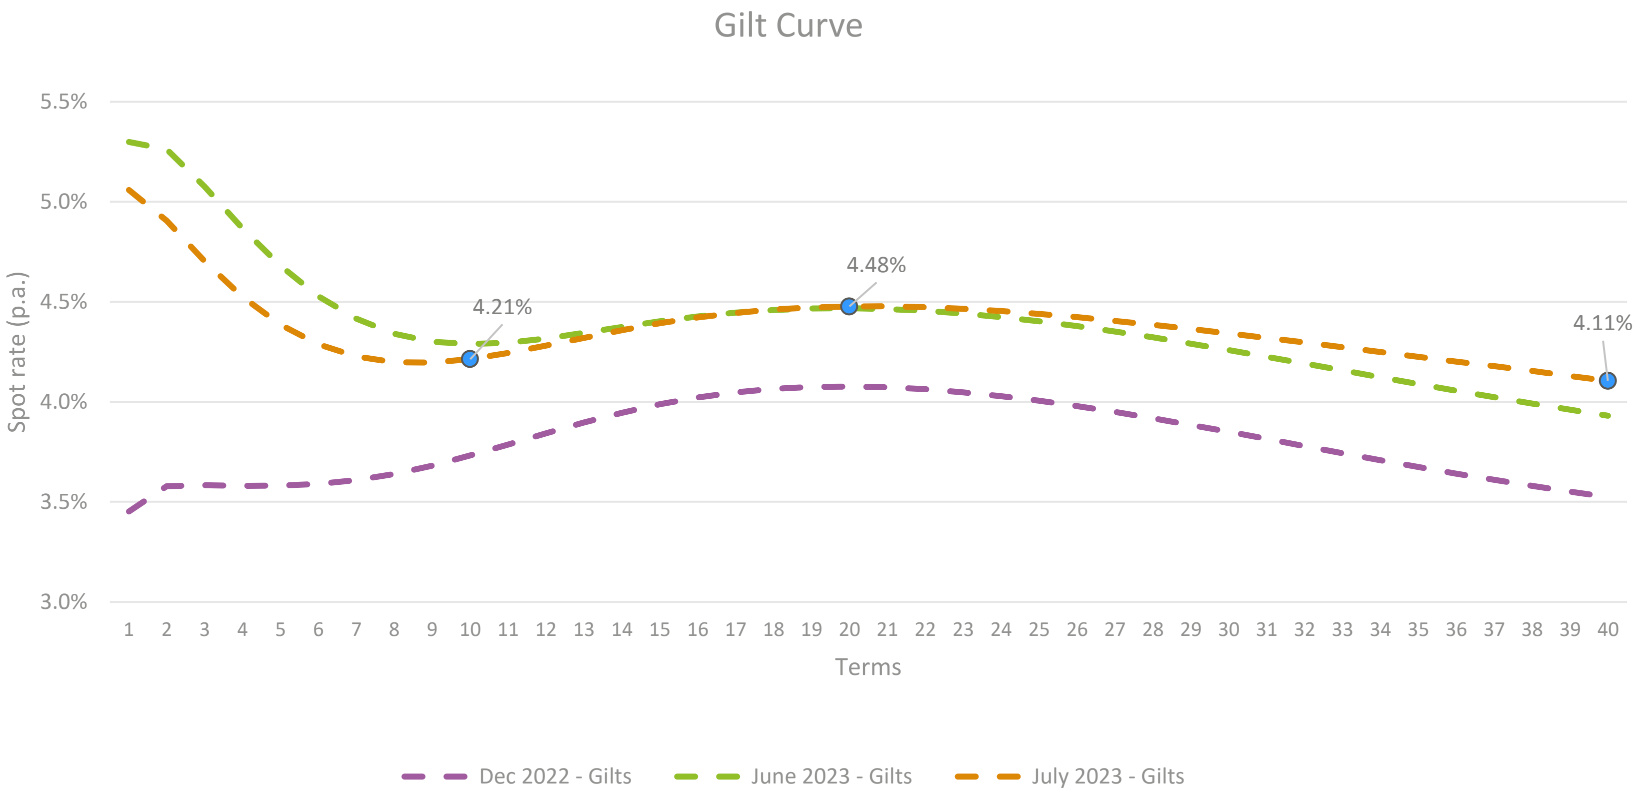


The rates decreased at the short end during July. Initially, rates decreased by 0.06%, then increased by 0.08% at 10 years and increased by 0.16% at 20 years. The curve shape is similar to June's with a sharp fall up to the 6 year term and then remained broadly flat.

The June 2023 curve was lower than December 2022 between the 5 and 18-th year term, subsequently overtaking it. Rates were lower by 0.13% at 10 years and higher by 0.06% at 20 years.

ZENITH ACTUARIAL

Gilt Curve – Bank of England Nominal Rates

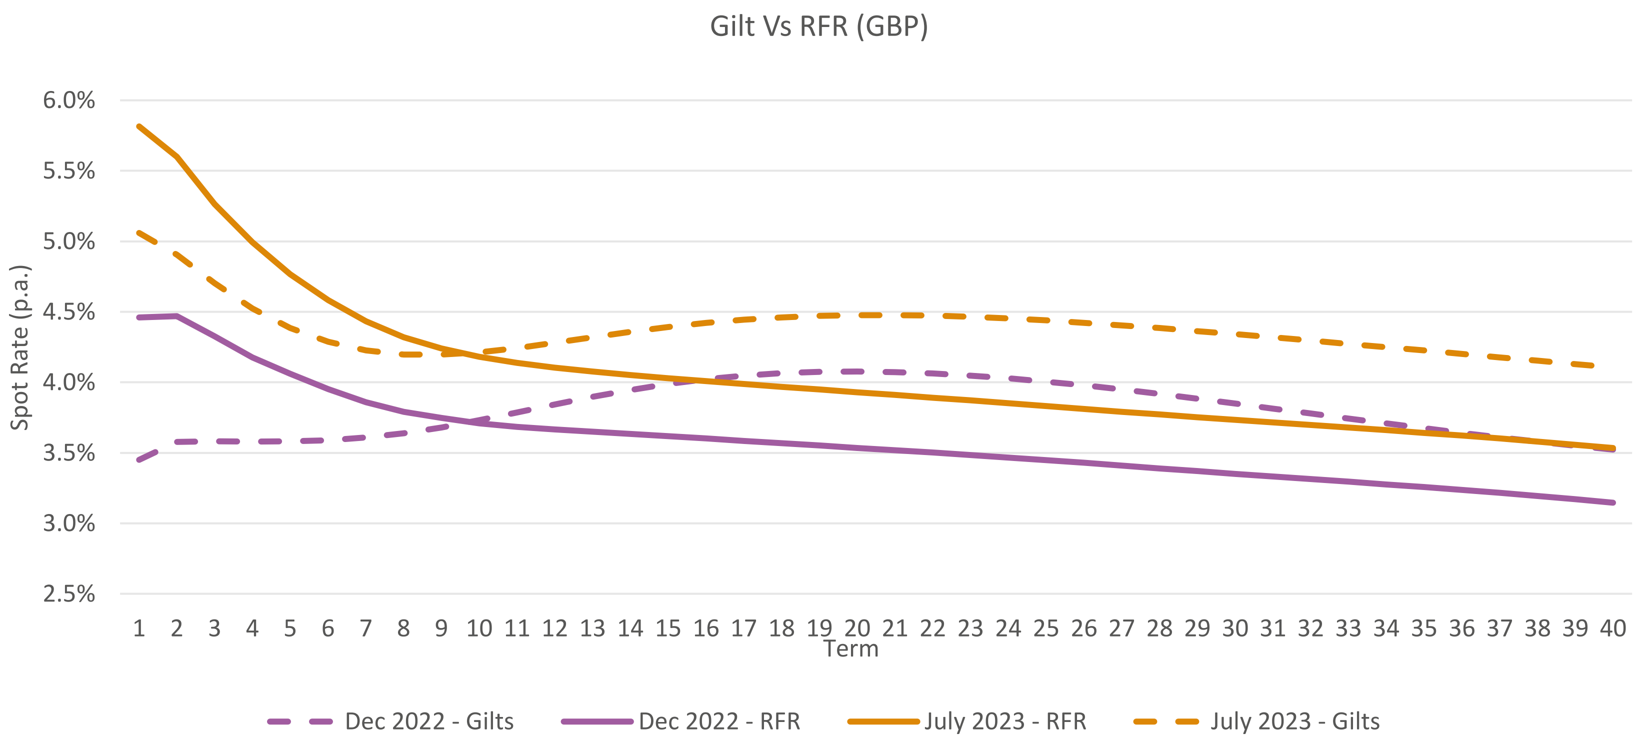


The Gilt curve fell at the short end and rose at the longer terms during July. It was down 0.08% at 10 years but increased by 0.01% at 20 years.

The July 2023 curve was higher than December 2022 and follows a similar shape after term 10, with rates higher by 0.48% and 0.40% at the 10-year and 20-year points, respectively.

ZENITH ACTUARIAL

Gilt Curve vs Solvency II PRA (Risk-Free Rates)



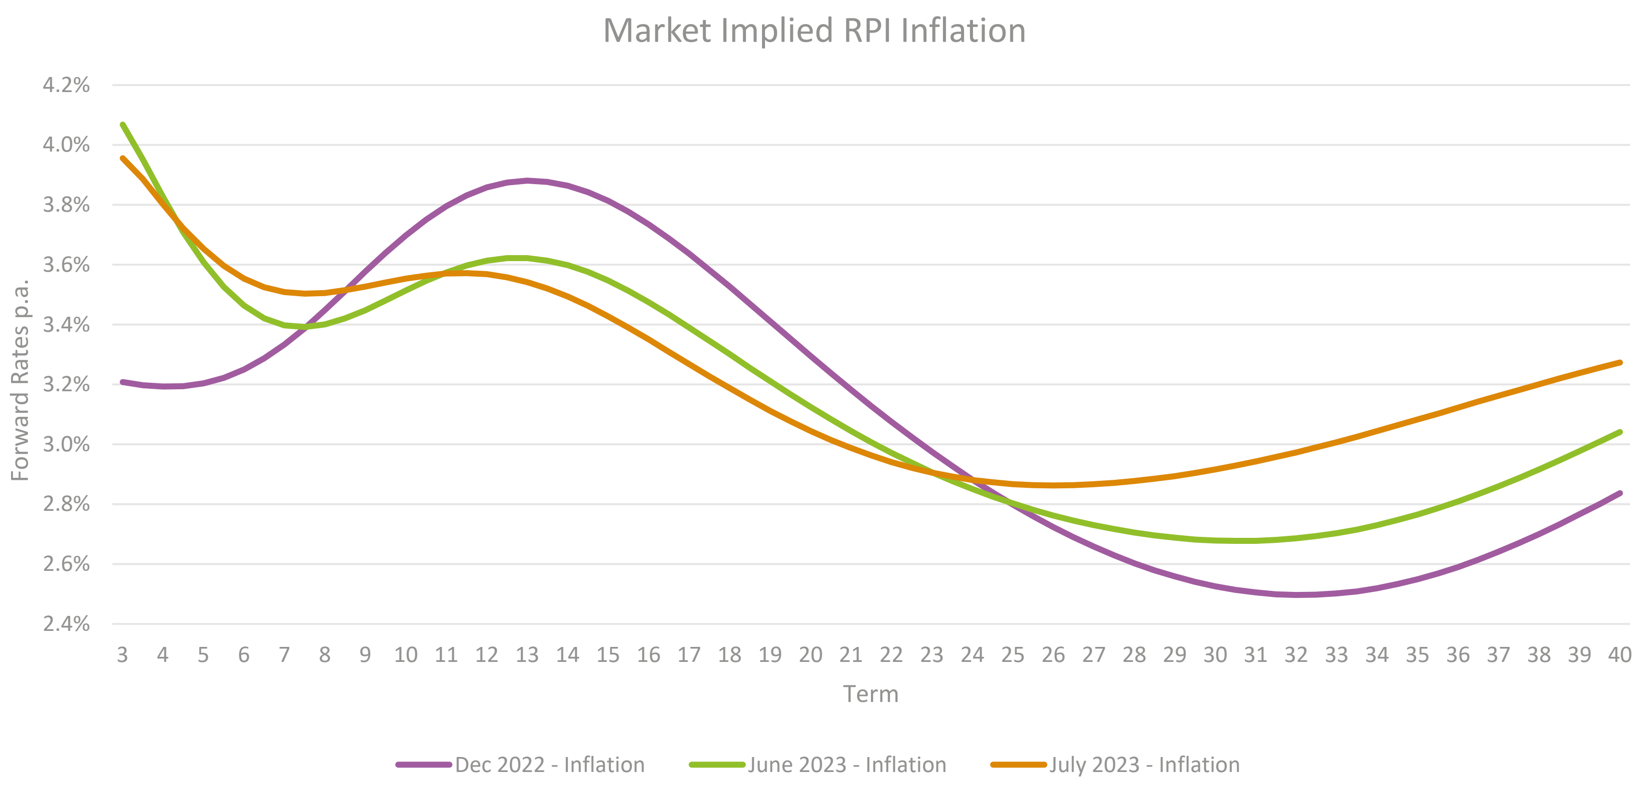
The December 2022 Solvency II (RFR) curve is higher than the Gilts curve before a crossover at the 10 year term.

The RFR rates for July 2023 are higher than Gilts for approx. 10 years before Gilts become higher.

The absolute differential between Gilts and the RFR has reduced at the short end and increased at the longer terms since December 2022.

ZENITH ACTUARIAL

Market Implied RPI Inflation

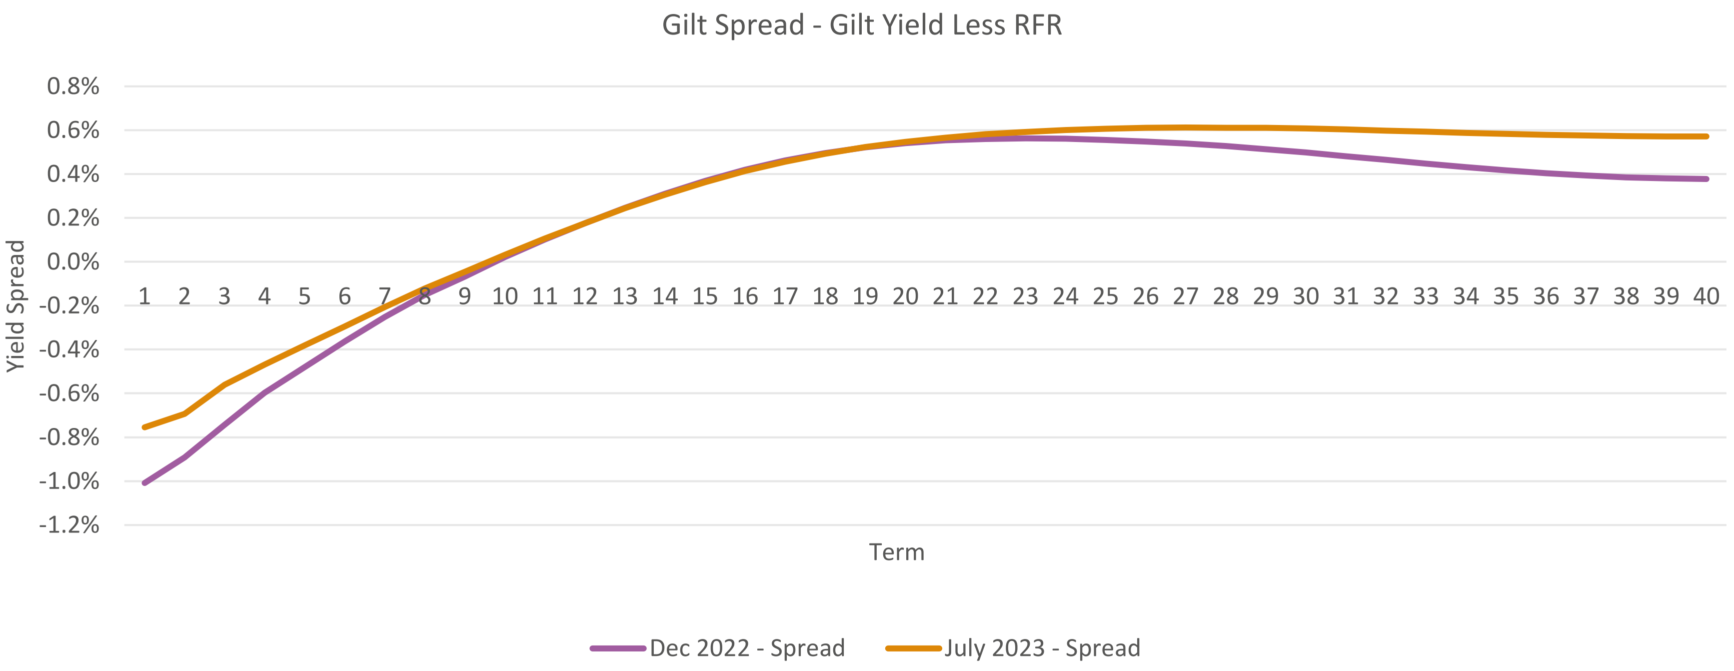


The curves show the forward rates of inflation starting at the 3 year term.

The July 2023 curve starts at a lower rate of 3.96% than June 2023 (4.07%). It decreases to 3.51% at term 8 before increasing to 3.57% at term 12 and then gradually decreases, following a similar shape to June 2023 crossing over 3 times.

The December 2022 curve has a sharper rise at earlier terms and then a gradual decline to 2.84%.

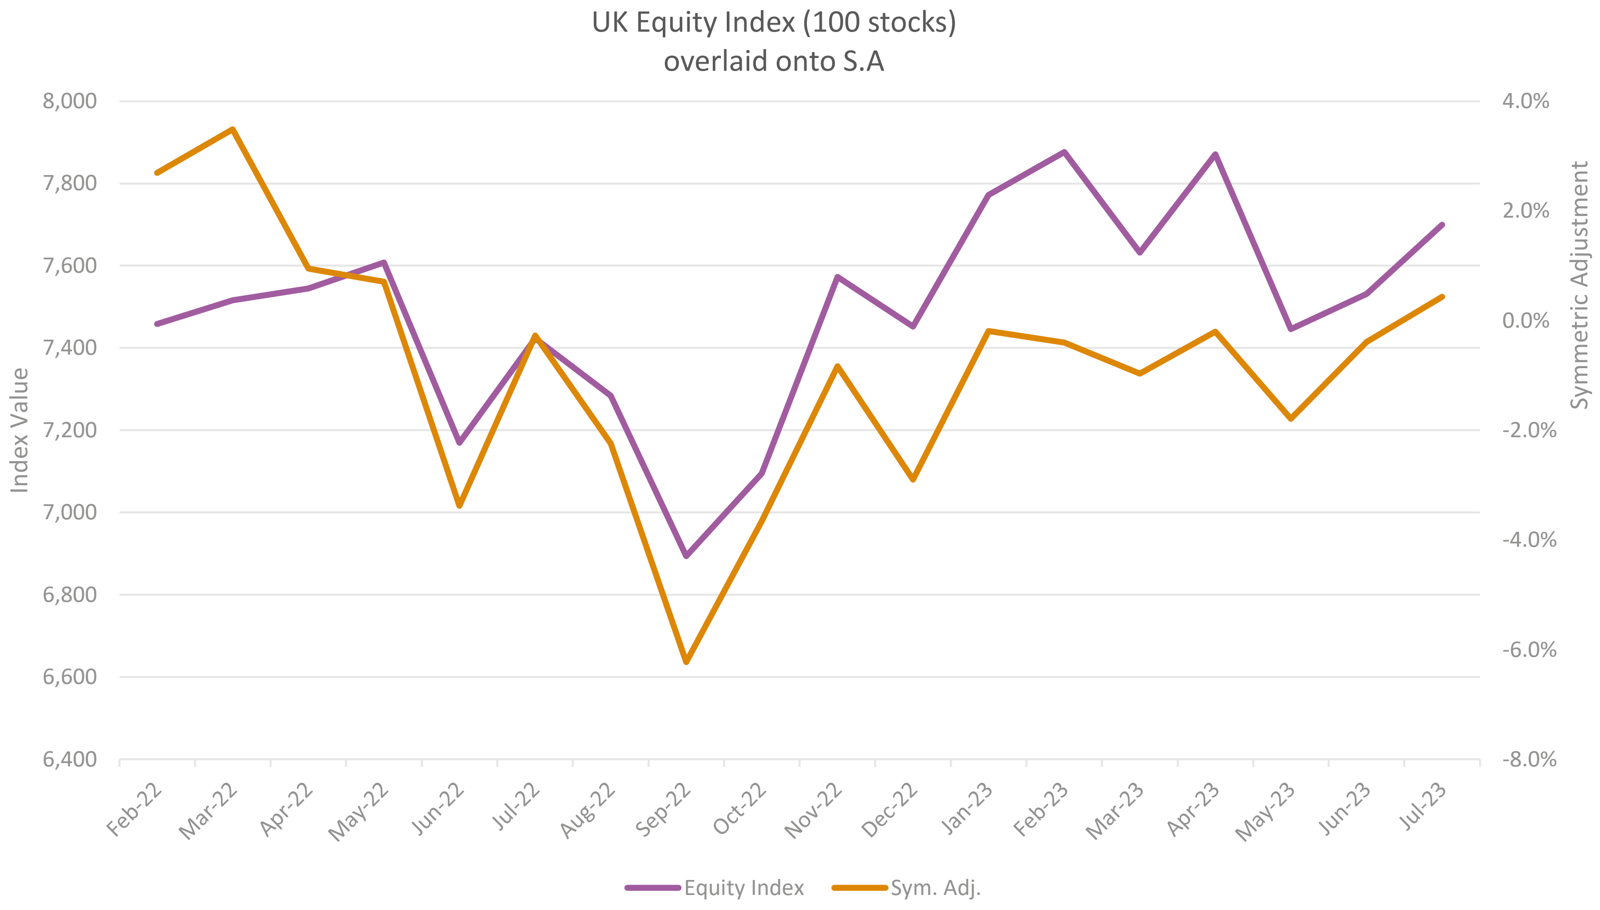
Gilt Curve Spread over PRA Risk-Free Rates



These curves show the gilt spread for July 2023 and December 2022. This represents the difference between the gilt yields and the RFR.

Compared to December 2022, the absolute spread at the short end is less negative in July 2023. They follow a similar shape with the absolute spread widening after term 24.

Equities – Symmetric adjustment chart overlaid onto Equity index

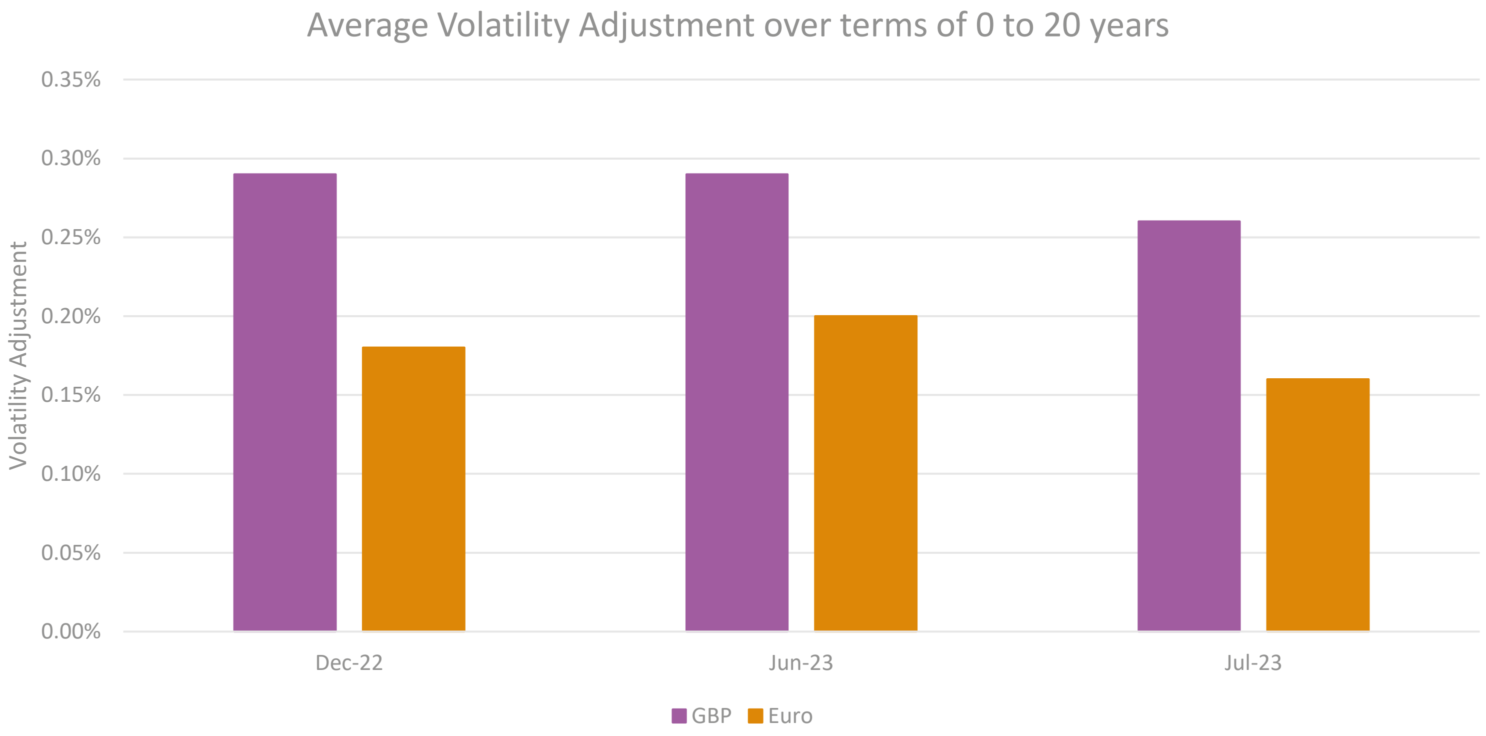


The Symmetric Adjustment has increased in July 2023 and has become positive. The UK index has increased by 2.23% in July. There is a also an increase in the US major equity index compared to June values (increased by 3.30%).

The adjustment has increased from a negative -2.90% at end December 2022 to 0.43% at end July 2023.

ZENITH ACTUARIAL

Volatility Adjustment



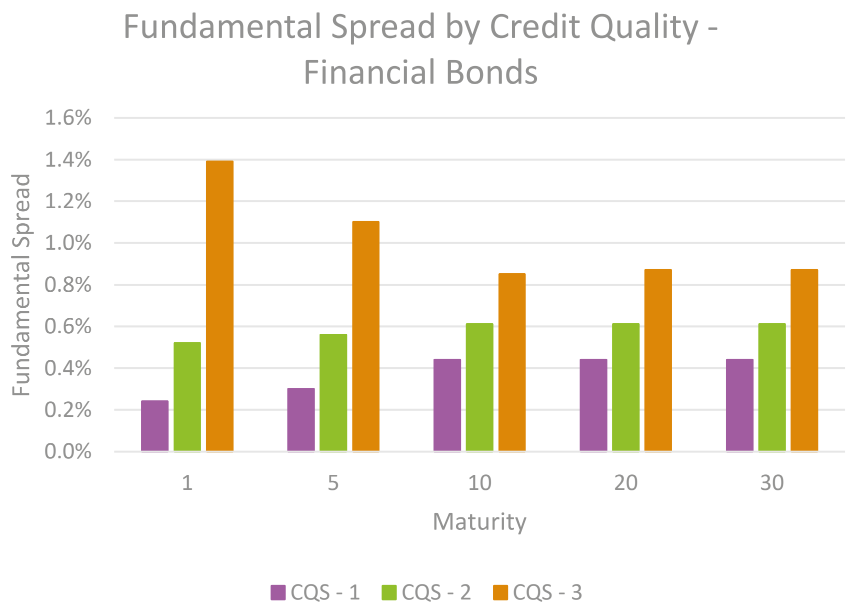
This chart shows the average volatility adjustment (VA) for both GBP and EUR currencies.

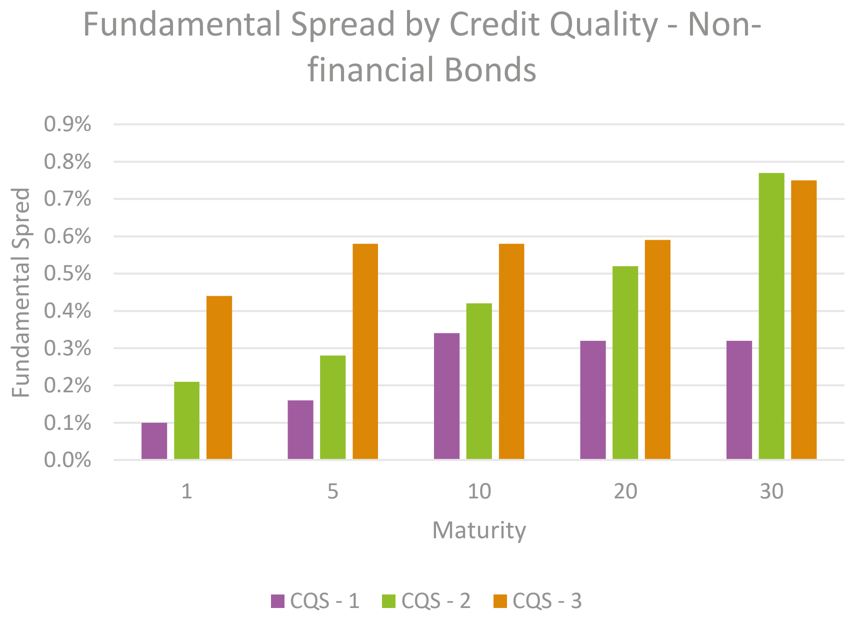
The volatility adjustment for each currency is based on a reference portfolio of government and non-government assets. This is used to determine the currency spread and the shown volatility adjustment.

Over July 2023, for GBP the average VA has decreased from 0.29% to 0.26%; further the EUR average has also decreased from 0.20% to 0.16%.

ZENITH ACTUARIAL

GBP Fundamental Spread





The fundamental spread ('FS'), which allows for credit risk (i.e default and downgrade risk), is used as part of the matching adjustment ('MA') calculation. The MA is applied (subject to PRA approval) to the basic risk-free interest rate to derive the discount curve used for the BEL calculations. The MA is calculated as the excess yield over risk free on an undertaking's own portfolio of matching assets less the FS and can be considered to be the spread for illiquidity risk.

There has been a very limited number of changes from YE2022, with some values changing by 0.01% for Credit Quality Step 1, -0.01% for CQS 2 and -0.02% for CQ Step 3.

ZENITH ACTUARIAL

Considerations for your business

Please note these comments are aimed primarily at UK insurers with Long Term Business liabilities, and do not take account of aspects such as Transitional measures or different currencies. In addition, they are aimed at providing a high-level view, and the changes to any specific insurer will depend on each firm's balance sheet exposure.

- There has been a decrease in the Solvency II PRA (GBP) Risk-Free Curve for July 2023 at the short end and a small increase for longer terms. This will impact firms differently depending on the duration of liabilities, however in general should lead to an increase in the present value of liabilities.
- The difference between Gilt and Solvency II / PRA yields is useful to keep in mind in terms of asset-liability matching.
- The equity symmetric adjustment has increased in July 2023 and this could have an impact on the equity stress part of the SCR (but will depend on a firm's exposure, loss absorbency, management actions etc).

Zenith is able to discuss and help with any of these balance sheet and capital management issues, or other actuarial topics that you might be seeking support on.
